Let's Start!

A Little Talk on C#

Learning Outcome:

Describe a general-purpose computer programming language, regarding its history and architecture in spoken and written situations.

Ask your partner:

- How old do you think C# is?
- What are some advantages of using C#?

Can Do Statements:

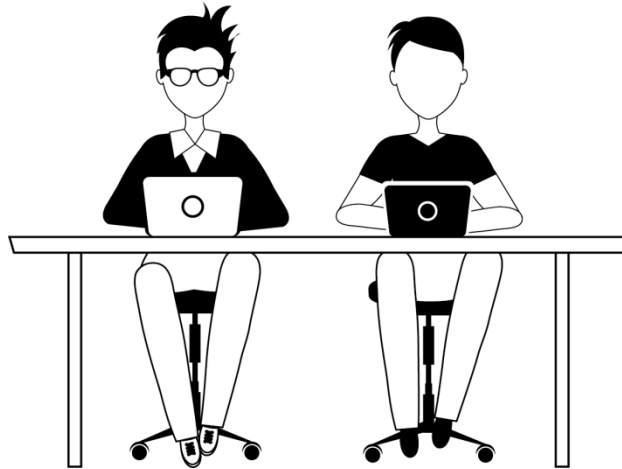

- I can describe C#.
- I can talk about reasons why C# is a popular professional language.
- I can list some programming features of C#.

Let's Explore!

Millie and Mark are discussing about C#.

Instructions: Read the text below.

Millie: How useful is C# language?

Mark: It is very useful. It is a general-purpose programming language; you can write almost any program or app with it.

Millie: Will programmers be able to create websites with that language?

Mark: No, it's not possible. But C# is the coding language of choice for operating system development, and as you might know, the operating system controls every other program on a computer. Nowadays, C# is used to write codes of all levels thanks to being a small, efficient, powerful, and fast executable code. It also consists of a runtime environment that configures the device to run code produced by the compiler.

Millie: Well, now I know it's very useful, but how popular is it?

Mark: C# has several characteristics that make it popular amongst programmers. It is object oriented and component oriented, you can compile it on several computer platforms, and the best part is that it is really easy to learn. It also has some important programming features, including conditional compilation, assembly versioning, automatic garbage collection, standard library, and integration with Windows, among a number of other features.

Millie: Will C# still be so popular in the following years?

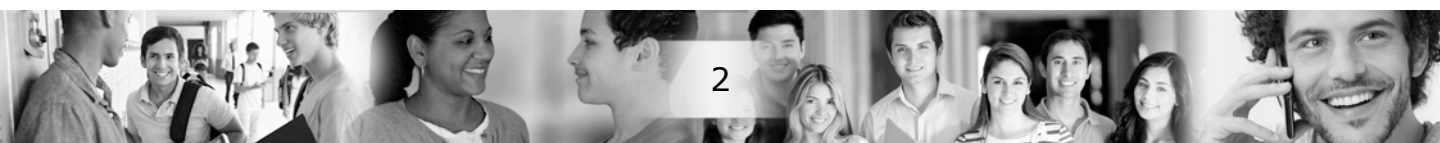

Mark: We don't really know, but it is very likely.

Millie: How good is C# language for you on a scale of 0-10?

Mark: For me is a 10. It's a low-level language, which means it's closer to the machines. It is a tight language, which means that each variable must have a declared type.

Millie: Your expertise relating to this language is amazing; will you give a course on C# soon?

Mark: I don't think so. I'm good at explaining things, but then when it comes to speaking in public, I get terrified.

**Let's Practice!**

Mark is preparing a presentation about C#.

Instructions: Select the correct option to correctly complete each sentence.

1. Will you (describing / describes / describe) C# in your presentation?

2. Will you include that the C# language (be / is / are) a general purpose programming language?

3. Will they (understand / understood / understands) that with the C# language, they can write almost any software or app?

4. Will you (explain / explained / explaining) that it is not possible to create websites?

5. Will you say that the programming language is used (to write / write / to writes) codes of all levels?

**Let's Practice!**

How good is C#?

Instructions: Circle the correct option to complete the sentences. Read the sentences aloud. Check your pronunciation with your partner.

1. How (popular / popularity) is C# among different companies?
2. How (professional / professionalism) does C# work?
3. How (efficient / efficiency) is this operating system for engineers?
4. (Where fast / How fast) is this system to execute codes?
5. How (effective do / effective does) it result to control different programs?

Extension Activity

Let's explain C programming!

Instructions: Complete the following steps. Fill in the Self-Assessment.

- Make a diagram using different shapes in a big piece of cardboard.
- Divide your poster into three different sections. In the first one, include some words inside the shapes that define C# programming.
- In the second one, write down some words that summarize the features of C#.
- Finally, search on the internet some advantages of using C programming and include them in the third section.
- Be ready to show your poster and share your ideas with your classmates and teacher.

Self-Assessment

Yes

No

- I search for information on C# features.
- I classify information I get from the internet
- I produce tables with comparative information

☐ ☐
☐ ☐
☐ ☐

Target Words

- a number of** (idiom): a group of several things
e.g. It also has some important programming features, including conditional compilation, assembly versioning, automatic garbage collection, standard library, and integration with Windows, among a number of other features.
- still** (adverb): keeping the same conditions up to certain time
e.g. Will C# still be so popular in the following years?
- expertise** (noun): advanced knowledge on a specific subject
e.g. Your expertise relating to this language is amazing; will you give a course on C# soon?
- runtime** (noun): the length of time a program last to run.
e.g. It also consists of a runtime environment that configures the device to run code produced by the compiler.
- general-purpose** (adjective): that can be used towards reaching several objectives
e.g. It is a general-purpose programming language; you can write almost any program or app with it.
- of choice** (idiom): the most widely preferred option
e.g. C# is the coding language of choice for operating system development.

Learning Points

Future With Will – Interrogative Form

The auxiliary **will** helps us talk about the future. When making questions, **will** is in a specific position within the sentence

You ask questions with **will** when you request information about a future fact. As usual, you can ask for specific information making an open question or you can also ask yes/no questions. This is the structure that you follow to create these questions:

Closed Questions:

Will + subject + verb + complement + ?

Example: **Will** you program the application with C++ or C#?

Open Questions:

Wh question word + **will** + subject + verb + complement + ?

Example: *When will* you issue the new application?

Sometimes, you can find a question with **will** in which you don't necessarily ask for information, but in a **very informal** way, you request someone to do something.

Example: **Will** you hand me the laptop, please?

Examples

- *Will programmers be able to create websites with that language?*
- *Will C# still be so popular in the following years?*
- *Will you give a course on C# soon?*

Learning Points

How + adjective

We use this **how + adjective** structure to ask about the degree of quality of an object.

Form: **How + adjective** + verb to be + pronoun + infinitive?

Example: **How necessary** *is it to learn C language first?*

Form: **How + adjective** + verb to be + object

Example: **How important** *is C language?*

Pronunciation: It is an information question, so it has a falling intonation; it falls at the end.

If you invert the order how + adjective + subject + verb, it becomes an exclamation:

Example: Now I know **how awesome** C language is!

Examples

- *How useful is C# language?*
- *How good is C# language for you on a scale of 0-10?*
